

WHOLISTIC™ Wild, Deep Sea Salmon Oil **The Wholistic Pet**

Our Salmon Oil is the finest quality human-grade, salmon oil from the body of fresh-caught salmon.

The Wholistic Pet Supplements

The Wholistic Pet™ Deep Sea Salmon Oil is the finest grade of human-grade, deep-sea salmon oil available. The salmon used to produce this superior oil are wild, free-swimming salmon caught directly from the ocean. They are not farm-raised salmon and therefore not subject to the possible pollution or contamination inherently present in commercial farming streams, penned ocean cages or other closed communities. And the taste is superlative!

Wholistic Deep Sea Salmon Oil™ is the finest quality human-grade, salmon oil from the body of fresh-caught salmon. Rich in EPA and DHA, it is the perfect combination of Omega-3's and Omega 6's that is naturally present in our freshly-harvested salmon straight from the cold waters of the North Atlantic!

Wholistic Wild, Deep Sea Salmon Oil™ :

The purest, most potent Omega-3s from one of nature's richest sources, the wild Salmon! Your pet is a member of the family, and you're constantly striving to provide the best possible nutrition. However, a typical diet may not provide all the essential fatty acids your pet needs for

optimal health. A high quality fish oil rich in essential fatty acids can make all the difference to your pet's continued health and well-being.

Wholistic Deep Sea Salmon Oil™ is the finest grade of human-grade, deep-sea salmon oil available. It's derived from wild, free-swimming salmon caught directly from the ocean. Unlike farm-raised salmon, wild salmon are not subject to the possible pollution or contamination often found in commercial farming streams, penned ocean cages, or other closed communities. And the taste is superlative!

Our Wholistic Deep Sea Salmon Oil™ is clear, brilliant pink with a light, airy aroma. Its characteristic color is from the metabolic breakdown of antioxidants that wild salmon consume in their natural diet. Cold-processed in a state-of-the art facility located where the fish are actually caught, the body oils are captured through a patented method designed to ensure purity and freshness. To increase stability, we add pure, natural Vitamin E. It's like eating salmon straight from the ocean... only better!

Wholistic Wild, Deep Sea Salmon Oil™ FAQ:
(Keeping Your Pet Happy and Healthy By feeding)

What exactly is Omega-3?

Omega-3 is a polyunsaturated fat that is liquid at room temperature. Fat is an important and necessary part of any diet, yet not all fats are the same. Saturated fats, such as those found in meats, are "bad" for health. Unsaturated fats, such as those found in fish, are "good".

Omega-3 and Omega-6 fatty acids are both "good" polyunsaturated fats. Salmon oil delivers Omega-3 fatty acids in the body-ready form of DHA and EPA (docosahexaenoic acid and eicosahexaenoic acid). Essential to life and good health, Omega-3 fatty acids help protect against disease and illness. These essential fatty acids are key to good health but cannot be manufactured by the body. Omega-3 must be obtained from the diet.

Your Pet's Health is in the Balance.

Omega-3 and Omega-6 both work together to promote health, and maintaining an appropriate balance is important.

- Omega-3s, primarily found in fish oils, have anti-inflammatory benefits and help support normal cardiovascular function.

- Omega-6s, primarily in vegetable oils, support healthy, supple skin.

An ideal balance between Omega-6 and Omega-3 is approximately 5:1 or lower. However, the high consumption of saturated fats in modern diets can boost the ratio as high as 30:1. This improper balance may lead to health issues, such as cardiovascular issues, arthritis, psoriasis, and even some forms of cancer. Adding more Omega-3 fatty acids to the diet can help restore the essential fatty acid balance your pet needs for optimal health.

Essential fatty acids found in plant oils must be broken down to become available for metabolism. This breakdown process can sap as much as 80 percent of the essential fatty acids. In some cases, pets may not be able to convert plant fatty acids into the DHA and EPA they need. That's why feeding a high quality fish oil with "body-ready" essential fatty acids such as salmon oil can make a major difference in your pet's health.
